

How to make a crown ornament

For each crown you will need five or six 3" squares, plus one long strip 1" x 11".

1. Fold each 3" square carefully on the diagonal to make triangles.

2. Make the circular base of the crown by overlapping the edge of the long strip on itself by about 1 1/4". Staple or tape it together.

3. Slide one triangle onto the band, pushing the fold all the way, snugly onto the band.

4. Slide another triangle onto the band, overlapping the first triangle so that no band shows between the two triangles.

5. Continue adding triangles in this way until the entire band is covered and no band is showing between the triangles. The triangles will stay on with no glue needed.

6. Five triangles should fit perfectly, but six can work if you want more overlap with your triangles.

Hang on your tree by sliding it over a branch, or place it in a centerpiece.

You could make one for each place setting for Christmas dinner to remind guests the King of kings has arrived!
